PROFILE

Flutter Developer with strong hands-on experience building scalable applications with Flutter & Dart. Skilled in Clean Architecture, Bloc/Cubit, REST APIs, Firebase and Supabase. Founder of **Lamma**, a bilingual group-outings app built end to end. Graduated with Excellent Honors (Ranked 1st), with a solid academic foundation in Computer Science and Problem Solving.

WORK EXPERIENCE

Flutter Developer – INETWORK Middle East Hybrid I New Cairo, Cairo

- Engineering scalable, high-performance mobile solutions and contributing to system architecture using Clean Architecture and SOLID principles.
- Conducting comprehensive production-readiness and security audits to ensure full compliance with App Store and Play Store standards.

EDUCATION

Bachelor of Specific Education – Computer Science Department, Mansoura University 2021 – 2025

- Grade: Excellent with Honors I Class Rank: **1st in Department**.

TECHNICAL SKILLS

Frameworks & Logic	Flutter, Dart, SOLID Principles, Clean Architecture (MVVM), Problem Solving
State Management	Bloc, Cubit
Data & APIs	REST APIs (Dio/Http), Supabase (Postgres, RLS, Realtime, Edge Functions), Firebase (Auth, Firestore, FCM), SQLite, SharedPreferences
Architecture & Testing	get_it, go_router, fpdart (Either), bloc_test, mocktail, Localization & RTL
AI Tools	Prompt Engineering, AI-Assisted Development (Cursor AI, GitHub Copilot)
General Tools	Git, GitHub, Google Maps, Paymob
Languages	Arabic: Native I English: Very Good (Technical) / Good (Communication)

PROJECTS

Lamma لَمّة – Group-Outings App (Founder & Flutter Developer) github.com/sheriffahmy74/lamma-showcase
Flutter · Cubit · Clean Architecture · Supabase · Paymob · FCM

- Built an Arabic-first (RTL) bilingual app for Egypt: users discover outings, book a seat in an audience-specific group, pay, and join the group chat.
- Structured 12 features with feature-first Clean Architecture (Cubit, get_it, go_router, fpdart) across 432 Dart files, covered by 746+ automated tests running in CI.
- Designed the Supabase backend: Postgres with Row-Level Security, 75 migrations, RPCs, Realtime group chat, Edge Functions and localized push notifications.
- Kept money and capacity logic server-side: atomic bookings under a row lock prevent overbooking, and payments are confirmed only by the HMAC-verified Paymob webhook.

Nabdy – Healthcare Super-App (INETWORK)

- Conducted a comprehensive technical audit to resolve critical iOS Privacy Manifest compliance issues and Google Maps SDK authorization conflicts, ensuring full App Store readiness.
- Optimized performance and significantly reduced APK/AAB size through asset compression, dependency optimization and efficient build configurations; upgraded and refactored packages for stability and compatibility.
- Prepared and configured Google Play Console and Apple Developer accounts for deployment, publishing workflows and production release.
- E-Commerce App (NTI Graduation)**: Full UI development and REST API integration.
- Gym App**: Workout schedule generator with PDF output (built with AI support).

COURSES & CERTIFICATIONS

- NVIDIA DLI Generative AI**, ITI (Jan 2026): Python, LLMs and RAG.
- Certified Mobile App Developer**, NTI: intensive track completed with a 94% score.
- Various advanced mobile development courses on Udemy and YouTube.
