

Sherif Fahmy Mohamed

Flutter Developer

Mansoura, Egypt (Open to Relocation) | +20 100 409 3899 | sfhmy7124@gmail.com | Military Status: Exempted

Portfolio: sheriffahmy74.github.io/portfolio | linkedin.com/in/sheriffahmy0 | github.com/sheriffahmy74

PROFILE

Flutter Developer who builds and ships production apps end to end, from architecture and UI to backend integration and store release. Works with feature-first Clean Architecture, Bloc/Cubit, REST and Supabase/Firebase backends, and automated testing. Took a healthcare app through App Store and Google Play release, and built Lamma, a bilingual app with 12 features and 746+ tests. Ranked 1st in my Computer Science department.

EXPERIENCE

Flutter Developer – INETWORK Middle East Hybrid, New Cairo

Nabdy, a healthcare super-app (doctors, pharmacy, medical centers, orders) · [Google Play](#)

- Drove iOS release readiness: resolved iOS Privacy Manifest compliance issues and Google Maps SDK authorization conflicts that blocked App Store review.
- Reduced APK/AAB size and improved performance through asset compression, dependency cleanup and build configuration tuning.
- Ran security, dependency-health and architecture audits on a 570+ file codebase, documenting risks such as committed API keys and exported Android activities with prioritized fixes.
- Upgraded and refactored outdated packages for compatibility with current Flutter, Android and iOS SDKs.
- Set up Google Play Console and Apple Developer accounts and handled the release and publishing workflow.

PROJECTS

Lamma – Group-Outings App github.com/sheriffahmy74/lamma-showcase

[Flutter](#) · [Cubit](#) · [Clean Architecture](#) · [Supabase](#) · [Paymob](#) · [FCM](#)

- Designed and built, as sole developer, an Arabic-first (RTL) bilingual app where users discover outings, book a seat in an audience-specific group, pay, and join the group chat.
- Structured 12 features with feature-first Clean Architecture (Cubit, get_it, go_router, fpdart Either) and covered them with 746+ unit and bloc tests (bloc_test, mocktail) running in CI.
- Built the Supabase backend: Postgres with Row-Level Security, 75 migrations, RPCs, Realtime group chat, Edge Functions and server-localized push notifications.
- Kept money and capacity logic on the server: atomic bookings under a row lock prevent overbooking, and payments are confirmed only by the HMAC-verified Paymob webhook.

E-Commerce App – NTI Graduation Project Demo on LinkedIn

- Built the full UI and integrated the REST API.

TECHNICAL SKILLS

Mobile	Flutter, Dart, Bloc / Cubit, Material & Cupertino, Animations, Localization & RTL
Architecture	Clean Architecture (feature-first), MVVM, SOLID, Dependency Injection (get_it), go_router, fpdart
Backend & Data	REST APIs (Dio), Supabase (Postgres, RLS, Realtime, Edge Functions), Firebase (Auth, Firestore, FCM, Remote Config), SQLite, Secure Storage
Quality & Release	Unit & bloc tests (bloc_test, mocktail), CI with GitHub Actions, App Store Connect, Google Play Console
Integrations	Google Maps, Paymob payments, Push notifications
Tools	Git, GitHub, Postman, Figma, AI-assisted development

EDUCATION

Bachelor of Specific Education, Computer Science Dept. – Mansoura University 2021 – 2025

- Excellent with Honors · **Ranked 1st in Department.**

CERTIFICATIONS

- **Certified Mobile App Developer** – NTI: intensive Flutter track, final score 94%.
- **NVIDIA DLI Generative AI** – ITI (Jan 2026): Python, LLMs and RAG.

LANGUAGES

Arabic: Native · English: Very Good (technical), Good (conversational)
